

PAVAN BIRADAR

Aspiring Software Engineer | Full Stack Developer | Python & AI-Focused

+91-8073807675 | biradarpavan843@gmail.com | Bengaluru, India | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Final-year B.E. (Electronics & Telecommunication) fresher with hands-on experience building full stack web applications using Python, Django, REST APIs, and React.js, plus applied AI/ML experience through a CNN-based deep learning project. Skilled in SQL, AWS fundamentals (EC2, S3, IAM), and Generative AI tooling (OpenAI API, Hugging Face, prompt engineering). Seeking an entry-level Full Stack Developer or AI-Full-Stack Engineer role.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, HTML5, CSS3

Frameworks & Libraries: Django, React.js, REST API, Pandas, NumPy, OpenCV

Cloud & DevOps: AWS (EC2, S3, IAM), Git, GitHub, CI/CD basics, Docker (basic knowledge)

Databases: MySQL, Oracle Database (basic knowledge)

AI / ML & GenAI: Prompt Engineering, Generative AI Fundamentals, OpenAI API, Hugging Face

Core CS: Data Structures & Algorithms (Learning), Object-Oriented Programming, Agile/SDLC

Tools: VS Code, Cursor, GitHub Copilot, Postman

EXPERIENCE

Python Full Stack Development Intern — KodNest Technologies Pvt. Ltd. Feb 2026 – May 2026

Bengaluru, India

- Built and shipped MealBuddy, a full stack web application (Python, Django, HTML, CSS), covering user authentication, product browsing, and cart management end to end.
- Implemented SQL-backed data models and connected frontend-backend workflows via REST-style views, improving hands-on understanding of the full request/response cycle.
- Used AI-assisted development tools (GitHub Copilot, Cursor) within an Agile-style workflow to speed up debugging, code review, and iterative feature delivery.

PROJECTS

MealBuddy — Full Stack Web Application Apr 2026 – May 2026

- Designed and developed a full stack food-ordering platform (Python, Django, HTML, CSS) supporting user login, food browsing, cart management, and responsive UI across devices.
- Structured relational data models in MySQL and implemented backend logic for cart and order workflows, reinforcing frontend-backend integration skills.

Handwritten Mathematical Expression Recognition (CNN + RNN) Apr 2025 – Nov 2025

- Built a deep-learning pipeline (Python, Deep Learning, Computer Vision, CNN, OpenCV) to convert handwritten mathematical expressions from images into digital LaTeX output.
- Implemented image preprocessing steps — normalization and noise removal — to improve model robustness on noisy handwritten input.
- Trained and evaluated the model on the CROHME benchmark dataset, achieving reliable recognition across complex multi-symbol expressions.

EDUCATION

Bangalore Institute of Technology — B.E., Electronics & Telecommunication Engineering 2022 – 2026

Bengaluru, India | CGPA: 7.8 / 10

CERTIFICATIONS

- Cloud Computing Internship — Corizo EdTech; exposure to AWS and AI chatbot concepts
- TCS iON Career Edge (Young Professional) — Workplace readiness & IT fundamentals, with AI overview
- Full Stack Web Development — Coursework by Colt Steele, Udemy (in progress)

ACHIEVEMENTS

- Actively solving MySQL problems on LeetCode to strengthen problem-solving and query optimization skills
- Built and maintain multiple public GitHub repositories showcasing Python and full stack web development projects
- Presented a paper on an Arduino-based hand-gesture-controlled vehicle at an international conference (Dec 2024)
